

Internet Service Appliance

Product Highlights

- ▶ **Secure Remote Management**—Execute network changes remotely or onsite—no IT administrator required
- ▶ **High Reliability Design**—Solid state design for maximum reliability
- ▶ **Service Expandability**—Optional network services for exactly what your customer needs
- ▶ **Easy Installation**—Network is up and running in 10 minutes or less
- ▶ **Simple Plug and Play Expansion**—Share USB or IEEE1394 printers or hard drives instantly
- ▶ **Flexible WAN Options** —Multiple options available to support different connectivity requirements

Complete Small Office Network Solution - Everything You Need in One Simple Device

The Filanet™ InterJak™ is a Platform for Internet Services Delivery that offers the ability to quickly and cost effectively set up small to medium businesses as well as remote offices and telecommuters with a managed, integrated LAN and WAN solution. Using one simple device—with the Internet access mode of your choice—your customers can share Internet access, share files and printers, and instantly access additional devices via USB and IEEE1394 (FireWire™) ports.

The InterJak offers a comprehensive range of standard and optional business-class network services. These can be securely and efficiently installed and managed by both local and remote administrators.

Filanet offers comprehensive network management and service provisioning tools that enable service providers to dynamically manage and provision small office network services. The Service Provisioning Portal (SPP) is the key tool that not only automates network management tasks such as group configuration updates and software distribution, but also allows service providers to execute bulk management of InterJak devices.

InterJak 200

Platform for Internet Services Delivery

Product Features

- ▶ Secure web-based interface
- ▶ Telnet support for scripting
- ▶ Fail-safe configuration updates
- ▶ Automated updates
- ▶ System monitoring tools
- ▶ Customizable platform

Product Benefits

- ▶ Enhance your revenue stream
- ▶ Extend your customer base
- ▶ Save on deployment
- ▶ Lower operational costs
- ▶ Improve customer retention
- ▶ Differentiate your service portfolio

Management Features

- ▶ **Web Interface**—An embedded Web manager provides a browser-based interactive interface.
- ▶ **Telnet Interface**—Enables remote command-line access to administrative functions.
- ▶ **Secure**—All Web based remote administrative access occurs over a triple-DES encrypted Java-enabled interface.
- ▶ **Fail-Safe Updates**—Fallback recovery offers protection from mis-configuration, with fallback to check-pointed configuration.
- ▶ **Network Monitoring**—SNMP MIB-II support integrates with all leading network management platforms, providing fault and performance monitoring.
- ▶ **System Log**—Local or remote logging of specific events including security related events. System log events can be forwarded via E-mail.
- ▶ **Service Provisioning**—Manage multiple InterJak devices making it easy to activate service keys, change network configuration settings and policies.

Standard LAN/WAN Services

- ▶ **Firewall** — Stateful, dynamic firewall with built-in URL filtering offers strong protection from Internet-based attacks while enabling access to essential services.
- ▶ **File/Print Server** — USB and FireWire ports enable hot plug-and-play of hard disks and printers.
- ▶ **DHCP Server** — Dynamic Host Configuration Protocol server and client capabilities manage and assign IP addresses and settings on the LAN and WAN.
- ▶ **Network Address Translation** — Network Address Port Translation, (NAPT) and Multi-NAT map internal to external IP addresses, securing internal addresses.
- ▶ **IP Routing** — Routing between Ethernet and WAN ports.
- ▶ **Management Services** — Provides comprehensive set of tools for local and remote management.
- ▶ **DMZ Support** — Dedicated LAN segment supporting public hosts while private data is secured on a separate LAN segment.
- ▶ **PPPoE Support** — Utilize PPPoE to obtain IP address for users on LAN to share Internet access.

- ▶ **WAN Backup** — Monitors the primary WAN connection and activates a backup connection in the event of a failure.

Optional Network Services

- ▶ **VPN** — Securely and cost effectively connect remote offices and remote users over the Internet to resources on local networks.
- ▶ **Content Filtering** — Promotes intelligent Internet use while maintaining normal business and classroom activities.
- ▶ **Traffic Shaping** — Prioritizes network traffic to ensure good response time for important business applications.
- ▶ **Network Monitoring** — Provides statistics and status of your network. Graphs of network status enable fast pinpointing of problems.
- ▶ **Email Server** — The InterJak acts as a full email server relaying and receiving Internet email. Able to fetch email from other servers and provide central inbox.
- ▶ **Intrusion Detection** — Detects and reports various attacks against the InterJak and the protected network.
